[Portfolio](#)

I'm Hoang - a Product Designer with 4 years of experience designing complex digital products across SaaS and e-commerce. I work across the full design process: from user research and usability testing to high-fidelity prototyping and engineering handoff. I'm particularly drawn to problems where business logic, technical constraints, and user behavior intersect. I'm actively exploring how AI tools can accelerate validation workflows and close the gap between design intent and shipped product.

PROFESSIONAL EXPERIENCE

Product Designer at GemCommerce (09/2024 - Present)

SaaS - Global Product Company that helps people sell better online

- **Project "Element Settings 7.5"**: Conducted heuristic evaluation across element settings panels to identify UI inconsistencies, synthesized findings into a unified interaction pattern, and led post-launch iterations based on usability testing with real users. Shipped redesigned Hover Settings and Item Management Settings.
- **Project "Hover Settings in GemPages 7.5"**: Led the redesign of Hover Settings in GemPages 7.5 — reframing the interaction around user mental models instead of system architecture, reducing Intercom support tickets from 50 to fewer than 10 per week within a month of release.
- **Project "GemPages Mobile"**: Owned end-to-end design of GemPages' mobile editor across 3 sprints — defining information architecture for touch-based flows, working closely with engineers to adapt desktop interactions for mobile, and delivering settings coverage across 60+ elements to meet Shopify's Built for Shopify compliance requirements.
- **Project "Prototype with Claude Code"**: Developed an AI-assisted rapid prototyping workflow (Figma → Claude Code → GitHub → Vercel), enabling high-fidelity, interactive prototypes that reduced handoff ambiguity, supported usability testing. Aligned design, product, and engineering teams around working behavior rather than static documentation.

UX/UI Designer at Magenest (08/2023 - 08/2024)

eCommerce - Digital Transformation solution providers

- **Project "Viettel Construction - AIO Homes"**: Designed a website experience balancing functionality and visual clarity, aligned with brand guidelines shared across AIOsmart and AIOService.
- **Project "Magenest Store Icon Design"**: Conducted a visual audit and redesigned 80+ icons to improve storefront consistency and visual hierarchy. Validated the redesign through user surveys, with 94% of respondents preferring the new design — demonstrating the impact of systematic visual improvements on perceived product quality.

UX/UI Designer at Capi Product (07/2022 - 06/2023)

Design Outsourcing Agency

- **Project "Capi Product Design System"**: Completed a design system, laying the foundation with visual direction and basic components. This project accelerated our pace by providing guidelines and basic components for other website projects.
- **Project "xPlainable"**: Built a comprehensive, cross-device design system for Xplainable — a machine learning platform. By introducing component-based design tokens, the system scoped changes precisely to intended elements, reduced design review cycles, and cut handoff time by roughly 60%.

EDUCATION

Bachelor of Engineering in Multimedia Technology and Design (2018 - 2023)

Posts and Telecommunications Institute of Technology

3.07/4 GPA

SKILLS

- **Design Tools:** Figma, FigJam, Adobe Illustrator, After Effects, ProtoPie
- **UX Methods:** User Research, Usability Testing, Information Architecture, Competitive Analysis
- **UI & Systems:** Design Systems, User Interface Design, Responsive & Mobile Design
- **Collaboration & Process:** Cross-functional Collaboration, Agile Workflow, Handoff with Engineering
- **Emerging:** AI for Design Research, AI-assisted Design Auditing
- **Technical:** Basic HTML, CSS
- **Soft Skills:** Problem Solving, Storytelling, Graphic Design
